WEATHER OF CONCERN

Weather of Concern

- For NW California, rainfall rates will likely peak during the afternoon hours, with total accumulations ranging from 2-3 inches over west facing mountain slopes. Local amounts near 4 inches will be possible over the King Range in southwest Humboldt county. Rock and mudslides may occur along mountain roads.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

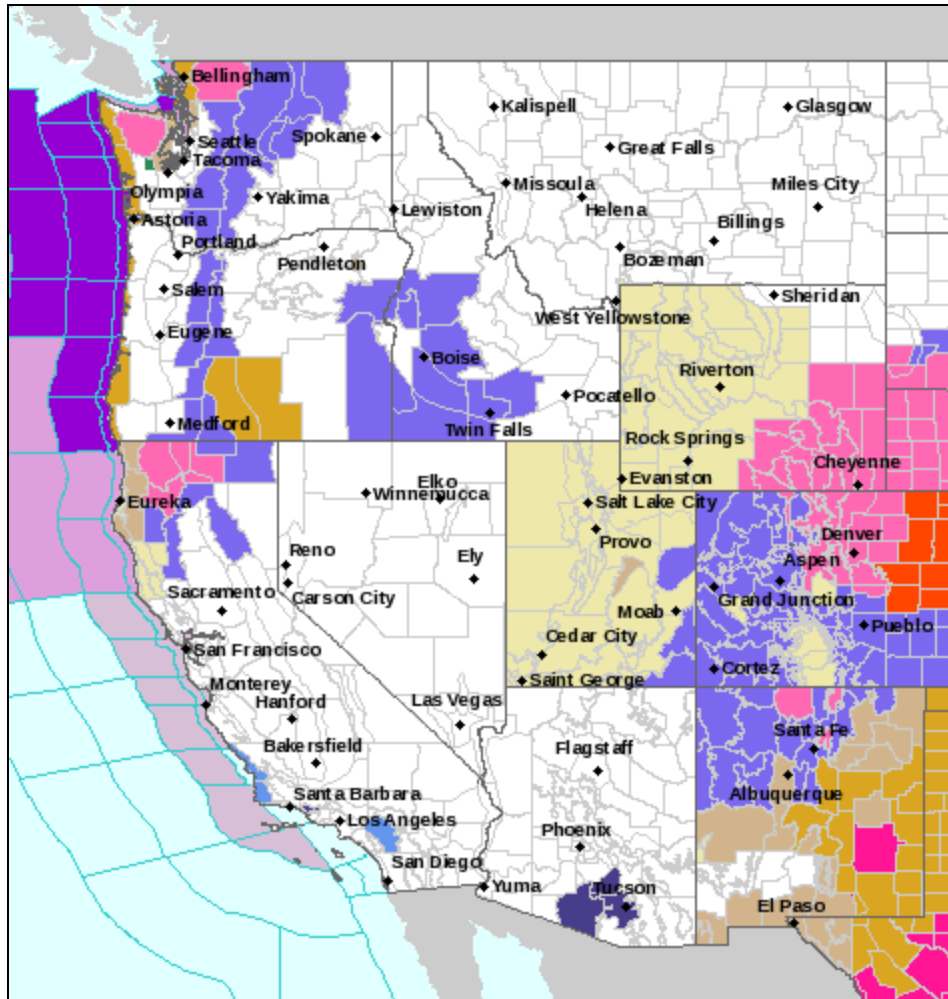

NORTHERN CALIFORNIA

A pacific storm moves through Sunday into Monday followed by another midweek into Friday bringing periods of rain, mountain snow, and gusty wind. Main forecast concerns for the short term period include a series of winter storms that will bring rain and mountain snow to Northern California. Water vapor and model upper level analysis from the early morning show upper level trough off the west coast of Canada with shortwave ridge of high pressure extending into the inner mountain west of the Continental United States. Moisture streaming in between the two upper features increased high level cloud cover early this morning, including the next storm system arrival.

SOUTHERN CALIFORNIA

Clear skies and generally light winds will lead to below normal temperatures this morning with areas of frost for colder coastal areas. A warming trend is expected through early next week as weak ridging builds aloft. A weakening cold front will likely push through the region later in the week, bringing wind and cooler conditions and possibly widespread rain and mountain snow showers.
